

ONLINE RADIATION MONITORING DASHBOARD AND DATA MANAGEMENT SYSTEM

Maslina binti Mohd Ibrahim, Nolida binti Yussup, Mohd Fauzi bin Haris, Nursuliza binti Samsudin, Raymond Yapp Tze Loong, Harzawardi bin Hasim, Mohd Dzul Aiman bin Aslan

INTRODUCTION

Online radiation monitoring dashboard and data management system allows the implementation of a comprehensive radiation monitoring environment, including centralization of the radiation monitoring, logging of measuring data and generating reports. The system is developed to monitor and record the radiation levels at various strategic locations in Nuklear Malaysia. The modular monitoring system permits user to have a real time and continuous data monitoring even if one or more of the radiation monitoring devices stop working due to malfunction, power outage and network down. The system can be configured to adapt with different types of area monitor and site requirements. The system also has four levels of authorization to ensure the safety of the data. The system comes with data trending and data query functions for data analysis and reporting.

HIGHLIGHTS

- Centralized Data Monitoring
- Modular And Flexible System
- Real-time Data Acquisition
- Export Data History
- Specific Period For Data Query
- 4 Level Of Authorization
- Single Sign-on (SSO)
- Notification Via E-mail
- Auto Generated Report
